Hazmat Environmental Group Inc. Partner with Valor TPMS

HAZMAT Environmental Group Inc. a leading North American transporter of hazardous and non hazardous materials including concentrated sulphuric acid recently completed a successful trial of the Valor tire pressure and temperature monitoring system (TPMS) on tractors in their fleet. HAZMAT has now committed to outfit the fleet with TPMS on all tractors and trailers in its fleet.

The trucks run through the harshest weather seen in North America. HAZMAT needed a reliable system that functioned well in all climates. The Valor Tire Pressure Monitoring System will report accurate tire pressure and temperature in real time to the driver. The system will notify the driver of low pressure, over pressure, slow leak, and high temperatures on any wheel in real time. This allows the driver to react to any wheel issue before it becomes a dangerous situation.

“We have tried other solutions and they all caused more problems than they solved” says Vince Phillips, the Maintenance Supervisor for HAZMAT.

“The reason we are adopting TPMS is for improved safety. The improved fuel mileage and tire life are just added bonuses” says Vince. Safety is a primary concern at HAZMAT and it shows in the maintenance department.

HAZMAT owns and maintains one of the safest and most reliable fleets in North America. Adopting Valor’s TPMS system has just made one of the best, better.

About HAZMAT

Headquartered in Buffalo New York HAZMAT Environmental Group Inc. a leading North American transporter of hazardous and non hazardous materials including concentrated sulphuric acid the fleet operates across the US and through northern Canada.
